

The document "Software Engineering Best Practices Guide"

Generated by Sastra AI Sovereign Assistant

The document "Software Engineering Best Practices Guide" has been successfully generated. You can download it using the link provided in the system output above.

This guide covers:

- Clean Code Principles: SRP, DRY, and naming conventions.
- Modern Standards: Type safety, version control, and documentation.
- Cambodian Tech Context: Best practices for Bakong KHQR integration and Khmer Unicode support.
- QA/Testing: Strategies for unit, integration, and CI/CD pipelines.

Is there a specific technical topic or a code implementation you would like me to expand upon in a future document?
